Tnfrsf1a Mouse shRNA Plasmid (Locus ID 21937)

Product data:

Product Type: shRNA Plasmids

Product Name: Tnfrsf1a Mouse shRNA Plasmid (Locus ID 21937)

Locus ID: 21937

Synonyms: CD120; CD120a; FPF; p5; p55; p55-R; TN; Tnf; TNF-a; TNF-a; TNF-alphaR1; TNF-R-I; TNF-R-I; TNF-

R1; TNF-R55; TNFal; TNFalpha-R1; TNFAR; TNFR; Tnfr-2; Tnfr1; TNFR60; TNFRI; TNFRp55

Vector: pGFP-C-shLenti (TR30023)

E. coli Selection: Chloramphenicol (34 ug/ml)

Mammalian Cell

Selection:

Puromycin

Format: Lentiviral plasmids

Components: Tnfrsf1a - Mouse, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 21937).

5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.

RefSeq: BC004599, BC052675, NM 011609, NM 011609.1, NM 011609.2, NM 011609.3, NM 011609.4,

BC096429

UniProt ID: P25118

Summary: This gene encodes a member of the TNF receptor superfamily of proteins. The encoded

receptor is found in membrane-bound and soluble forms that interact with membrane-bound and soluble forms, respectively, of its ligand, tumor necrosis factor alpha. Binding of membrane-bound tumor necrosis factor alpha to the membrane-bound receptor induces receptor trimerization and activation, which plays a role in cell survival, apoptosis, and inflammation. Proteolytic processing of the encoded receptor results in release of the soluble

form of the receptor, which can interact with free tumor necrosis factor alpha to inhibit inflammation. Mice lacking a functional copy of this gene exhibit impaired immune function.

[provided by RefSeq, Sep 2016]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
