hese shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u> . f you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u> .
DriGene guarantees that the sequences in the shRNA expression cassettes are verified to orrespond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum ransfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to valuate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly ssess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.
