

Product datasheet for TL703254

Epn2 Rat shRNA Plasmid (Locus ID 60443)

Product data:

Product Type: shRNA Plasmids

Product Name: Epn2 Rat shRNA Plasmid (Locus ID 60443)

Locus ID: 60443

Vector: pGFP-C-shLenti (TR30023)

E. coli Selection: Chloramphenicol (34 ug/ml)

Mammalian Cell Puromycin

Selection:

- --- ----

Format: Lentiviral plasmids

Components: Epn2 - Rat, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 60443). 5µg

purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.

RefSeq: NM 001033914, NM 021852, NM 021852.1, NM 021852.2, NM 021852.3, NM 001033914.1,

NM 001033914.2, BC094524

Summary: The protein encoded by this gene is a member of the epsin protein family. Epsin proteins are

endocytic adaptors that function in the formation of clatherin-coated vesicles. Epsins contain

a highly conserved N-terminal homology domain that binds phosphatidylinositol 4,5-bisphosphate in the plasma membrane, two or three ubiquitin interacting motifs, two

clathrin-binding motifs, a cluster of aspartate-proline-tryptophan/phenylalanine repeats, and

two or three asparagine-proline-phenylalanine tripeptide repeats at the C-terminus. In

mouse, simultaneous knockout of this gene and its paralog results in embryonic arrest due to disruption of Notch signaling, suggesting a role as a specialized endocytic adaptor. Alternative

splicing results in multiple transcript variants. [provided by RefSeq, Mar 2015]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
