

Product datasheet for TL712781

Rac1 Rat shRNA Plasmid (Locus ID 363875)

Product data:

OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

Product Type:	shRNA Plasmids
Product Name:	Rac1 Rat shRNA Plasmid (Locus ID 363875)
Locus ID:	363875
Vector:	pGFP-C-shLenti (TR30023)
E. coli Selection:	Chloramphenicol (34 ug/ml)
Mammalian Cell Selection:	Puromycin
Format:	Lentiviral plasmids
Components:	Rac1 - Rat, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 363875). 5µg purified plasmid DNA per construct 29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.
RefSeq:	<u>NM 134366, NM 134366.1</u>
UniProt ID:	<u>Q6RUV5</u>

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

GRIGENE Rac1 Rat shRNA Plasmid (Locus ID 363875) – TL712781

Summary:	Plasma membrane-associated small GTPase which cycles between active GTP-bound and inactive GDP-bound states. In its active state, binds to a variety of effector proteins to
	regulate cellular responses such as secretory processes, phagocytosis of apoptotic cells,
	epithelial cell polarization, neurons adhesion, migration and differentiation, and growth-
	factor induced formation of membrane ruffles (PubMed:16040606, PubMed:16549782). Rac1
	p21/rho GDI heterodimer is the active component of the cytosolic factor sigma 1, which is
	involved in stimulation of the NADPH oxidase activity in macrophages. Essential for the
	SPATA13-mediated regulation of cell migration and adhesion assembly and disassembly.
	Stimulates PKN2 kinase activity (By similarity). In concert with RAB7A, plays a role in
	regulating the formation of RBs (ruffled borders) in osteoclasts (PubMed:16040606). In glioma
	cells, promotes cell migration and invasion (PubMed:20696765). In podocytes, promotes
	nuclear shuttling of NR3C2; this modulation is required for a proper kidney functioning
	(PubMed:19029984). Required for atypical chemokine receptor ACKR2-induced LIMK1-PAK1-
	dependent phosphorylation of cofilin (CFL1) and for up-regulation of ACKR2 from endosomal
	compartment to cell membrane, increasing its efficiency in chemokine uptake and
	degradation (By similarity). In neurons, is involved in dendritic spine formation and synaptic
	plasticity (PubMed:25498153). In synapses, seems to mediate the regulation of F-actin cluster
	formation performed by SHANK3 (PubMed:24089484).[UniProtKB/Swiss-Prot Function]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To
	be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u> .
	If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u> .
Performance	OriGene guarantees that the sequences in the shRNA expression cassettes are verified to
Guaranteed:	correspond to the target gene with 100% identity. One of the four constructs at minimum are
	guaranteed to produce 70% or more gene expression knock-down provided a minimum
	transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to
	evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly
	assess knockdown, the gene expression level from the included scramble control vector must
	be used in comparison with the target-specific shRNA transfected samples.
	For non-conforming shRNA, requests for replacement product must be made within ninety
	(90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with
	newly designed constructs, please contact Technical Services at techsupport@origene.com.
	Please provide your data indicating the transfection efficiency and measurement of gene
	expression knockdown compared to the scrambled shRNA control (Western Blot data

preferred).
