**Summary:** The protein encoded by this gene is reported to be a component of the DNA replication complex as well as a genome-maintenance protein. It may interact with proteins important for replication initiation and has been shown to bind chromatin at the G1 phase of the cell cycle and dissociate from chromatin with replication initiation. It may also serve to regulate checkpoint signaling as part of the DNA damage response. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Feb 2016]

**Protein Families:** Druggable Genome

### Product images:

Coomassie blue staining of purified CINP protein (Cat# [TP300085]). The protein was produced from HEK293T cells transfected with CINP cDNA clone (Cat# [RC200085]) using MegaTran 2.0 (Cat# [TT210002]).
