## **DUSP4 (NM 001394) Human Recombinant Protein**

**Product data:** 

**Product Type:** Recombinant Proteins

**Description:** Recombinant protein of human dual specificity phosphatase 4 (DUSP4), transcript variant 1,

100 µg

Species: Human Expression Host: HEK293T

**Expression cDNA Clone** >RC200640 protein sequence or AA Sequence: Red=Cloning site Green=Tags(s)

**TRTRPLEQKLISEEDLAANDILDYKDDDDKV** 

Tag: C-Myc/DDK
Predicted MW: 42.8 kDa

**Concentration:** >0.05 μg/μL as determined by microplate BCA method

**Purity:** > 80% as determined by SDS-PAGE and Coomassie blue staining

**Buffer:** 25 mM Tris-HCl, 100 mM glycine, pH 7.3, 10% glycerol

**Preparation:** Recombinant protein was captured through anti-DDK affinity column followed by conventional

chromatography steps.

**Note:** For testing in cell culture applications, please filter before use. Note that you may experience

some loss of protein during the filtration process.

Storage: Store at -80°C.

**Stability:** Stable for 12 months from the date of receipt of the product under proper storage and

handling conditions. Avoid repeated freeze-thaw cycles.

**RefSeq:** NP 001385

**Locus ID:** 1846

UniProt ID: Q13115
RefSeq Size: 5625
Cytogenetics: 8p12
RefSeq ORF: 1182

Synonyms: HVH2; MKP-2; MKP2; TYP

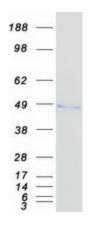

**Summary:** The protein encoded by this gene is a member of the dual specificity protein phosphatase

subfamily. These phosphatases inactivate their target kinases by dephosphorylating both the phosphoserine/threonine and phosphotyrosine residues. They negatively regulate members of the mitogen-activated protein (MAP) kinase superfamily (MAPK/ERK, SAPK/JNK, p38), which are associated with cellular proliferation and differentiation. Different members of the family of dual specificity phosphatases show distinct substrate specificities for various MAP kinases, different tissue distribution and subcellular localization, and different modes of inducibility of their expression by extracellular stimuli. This gene product inactivates ERK1, ERK2 and JNK, is expressed in a variety of tissues, and is localized in the nucleus. Two alternatively spliced transcript variants, encoding distinct isoforms, have been observed for this gene. In addition, multiple polyadenylation sites have been reported. [provided by RefSeq, Jul 2008]

Protein Families: Phosphatase

**Protein Pathways:** MAPK signaling pathway

## **Product images:**

Coomassie blue staining of purified DUSP4 protein (Cat# [TP300640]). The protein was produced from HEK293T cells transfected with DUSP4 cDNA clone (Cat# [RC200640]) using MegaTran 2.0 (Cat# [TT210002]).
