| Tag:                                     | C-Myc/DDK                                                                                                                                                   |  |
| Predicted MW:                            | 16.7 kDa                                                                                                                                                    |  |
| Concentration:                           | >0.05 µg/µL as determined by microplate BCA method                                                                                                          |  |
| Purity:                                  | > 80% as determined by SDS-PAGE and Coomassie blue staining                                                                                                 |  |
| Buffer:                                  | 25 mM Tris-HCl, 100 mM glycine, pH 7.3, 10% glycerol                                                                                                        |  |
| Preparation:                             | Recombinant protein was captured through anti-DDK affinity column followed by conventional chromatography steps.                                            |  |
| Note:                                    | For testing in cell culture applications, please filter before use. Note that you may experience some loss of protein during the filtration process.        |  |
| Storage:                                 | Store at -80°C.                                                                                                                                             |  |
| Stability:                               | Stable for 12 months from the date of receipt of the product under proper storage and handling conditions. Avoid repeated freeze-thaw cycles.               |  |
| RefSeq:                                  | <u>NP 059139</u>                                                                                                                                            |  |
| Locus ID:                                | 54107                                                                                                                                                       |  |

| Summary:        | POLE3 is a histone-fold protein that interacts with other histone-fold proteins to bind DNA in a sequence-independent manner. These histone-fold protein dimers combine within larger enzymatic complexes for DNA transcription, replication, and packaging.[supplied by OMIM, Apr 2004] |  |
| Protein Pathway | s: Base excision repair, DNA replication, Metabolic pathways, Nucleotide excision repair, Purine metabolism, Pyrimidine metabolism                                                                                                                                                       |  |

Coomassie blue staining of purified POLE3 protein (Cat# [TP300874]). The protein was produced from HEK293T cells transfected with POLE3 cDNA clone (Cat# [RC200874]) using MegaTran 2.0 (Cat# [TT210002]).
