Summary:	The protein encoded by this gene has an N-terminus that is similar to the multicopy associated filamentation (maf) protein of <i>Bacillus subtilis</i> and to orfE of <i>Escherichia coli</i> , while the C-terminus is similar to N-acetylserotonin O-methyltransferase. This gene is located in the pseudoautosomal region 1 (PAR1) of X and Y chromosomes. Three transcript variants encoding different isoforms have been found for this gene.
