## MAL (NM 002371) Human Recombinant Protein

**Product data:** 

**Product Type:** Recombinant Proteins

**Description:** Recombinant protein of human mal, T-cell differentiation protein (MAL), transcript variant a, 1

mg

Species: Human
Expression Host: HEK293T

**Expression cDNA Clone** >RC201256 protein sequence or AA Sequence: Red=Cloning site Green=Tags(s)

VHAVFSLIRWKSS

**TRTRPLEQKLISEEDLAANDILDYKDDDDKV** 

Tag: C-Myc/DDK
Predicted MW: 16.5 kDa

Concentration: >0.05 µg/µL as determined by microplate BCA method

**Purity:** > 80% as determined by SDS-PAGE and Coomassie blue staining

**Buffer:** 25 mM Tris-HCl, 100 mM glycine, pH 7.3, 10% glycerol

**Preparation:** Recombinant protein was captured through anti-DDK affinity column followed by

conventional chromatography steps.

**Note:** For testing in cell culture applications, please filter before use. Note that you may experience

some loss of protein during the filtration process.

Storage: Store at -80°C.

Stability: Stable for 12 months from the date of receipt of the product under proper storage and

handling conditions. Avoid repeated freeze-thaw cycles.

**RefSeq:** NP 002362

Locus ID: 4118

**UniProt ID:** P21145, A0A024RE19

RefSeq Size: 1153

Cytogenetics: 2q11.1 RefSeq ORF: 459

Synonyms: MVP17; VIP17

Summary: The protein encoded by this gene is a highly hydrophobic integral membrane protein

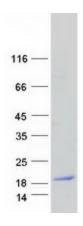

belonging to the MAL family of proteolipids. The protein has been localized to the

endoplasmic reticulum of T-cells and is a candidate linker protein in T-cell signal transduction. In addition, this proteolipid is localized in compact myelin of cells in the nervous system and has been implicated in myelin biogenesis and/or function. The protein plays a role in the formation, stabilization and maintenance of glycosphingolipid-enriched membrane microdomains. Down-regulation of this gene has been associated with a variety of human epithelial malignancies. Alternative splicing produces four transcript variants which vary from each other by the presence or absence of alternatively spliced exons 2 and 3. [provided by

RefSeq, May 2012]

**Protein Families:** Transmembrane

## **Product images:**

Coomassie blue staining of purified MAL protein (Cat# [TP301256]). The protein was produced from HEK293T cells transfected with MAL cDNA clone (Cat# [RC201256]) using MegaTran 2.0 (Cat# [TT210002]).
