	Morg1 (WDR83) (NM_032332) Human Recombinant Protein – TP301323L
UniProt ID:	Q9BRX9
RefSeq Size:	1219
Cytogenetics:	19p13.13
RefSeq ORF:	945
Synonyms:	MORG1
Summary:	This gene encodes a member of the WD-40 protein family. The protein is proposed to function as a molecular scaffold for various multimeric protein complexes. The protein associates with several components of the extracellular signal-regulated kinase (ERK) pathway, and promotes ERK activity in response to serum or other signals. The protein also interacts with egl nine homolog 3 (EGLN3, also known as PHD3) and regulates expression of hypoxia-inducible factor 1, and has been purified as part of the spliceosome. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Oct 2009]
