Summary: This gene encodes the mitochondrial enzyme ornithine aminotransferase, which is a key

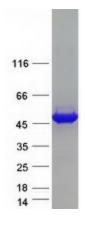

enzyme in the pathway that converts arginine and ornithine into the major excitatory and inhibitory neurotransmitters glutamate and GABA. Mutations that result in a deficiency of this enzyme cause the autosomal recessive eye disease Gyrate Atrophy. Alternatively spliced transcript variants encoding different isoforms have been described. Related pseudogenes

have been defined on the X chromosome. [provided by RefSeq, Jan 2010]
