#### DNAJB6 (NM\_005494) Human Recombinant Protein - TP301620L

**UniProt ID:** 075190 1568 RefSeq Size: Cytogenetics: 7q36.3 RefSeq ORF: 723

**Summary:** This gene encodes a member of the DNAJ protein family. DNAJ family members are

characterized by a highly conserved amino acid stretch called the 'J-domain' and function as one of the two major classes of molecular chaperones involved in a wide range of cellular events, such as protein folding and oligomeric protein complex assembly. This family member may also play a role in polyglutamine aggregation in specific neurons. Alternative splicing of this gene results in multiple transcript variants; however, not all variants have been fully

described. [provided by RefSeq, Jul 2008]
