TCTP (TPT1) (NM_003295) Human Recombinant Protein

Product data:

Product Type: Recombinant Proteins

Description: Recombinant protein of human tumor protein, translationally-controlled 1 (TPT1), 100 μg

Species: Human
Expression Host: HEK293T

Expression cDNA Clone >RC201664 protein sequence or AA Sequence: Red=Cloning site Green=Tags(s)

MIIYRDLISHDEMFSDIYKIREIADGLCLEVEGKMVSRTEGNIDDSLIGGNASAEGPEGEGTESTVITGV DIVMNHHLQETSFTKEAYKKYIKDYMKSIKGKLEEQRPERVKPFMTGAAEQIKHILANFKNYQFFIGENM

NPDGMVALLDYREDGVTPYMIFFKDGLEMEKC

TRTRPLEQKLISEEDLAANDILDYKDDDDKV

Tag: C-Myc/DDK

Predicted MW: 19.4 kDa

Concentration: $>0.1 \mu g/\mu L$ as determined by microplate BCA method

Purity: > 80% as determined by SDS-PAGE and Coomassie blue staining

Buffer: 25 mM Tris-HCl, 100 mM glycine, pH 7.3, 10% glycerol

Preparation: Recombinant protein was captured through anti-DDK affinity column followed by

conventional chromatography steps.

Note: For testing in cell culture applications, please filter before use. Note that you may experience

some loss of protein during the filtration process.

Storage: Store at -80°C.

Stability: Stable for 12 months from the date of receipt of the product under proper storage and

handling conditions. Avoid repeated freeze-thaw cycles.

RefSeq: <u>NP 003286</u>

Locus ID: 7178

UniProt ID: <u>P13693</u>, <u>A0A0P1J1R0</u>

RefSeq Size: 4649

TCTP (TPT1) (NM_003295) Human Recombinant Protein - TP301664M

Cytogenetics: 13q14.13

RefSeq ORF: 516

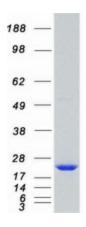

Synonyms: HRF; p02; p23; TCTP

Summary: This gene encodes a protein that is a regulator of cellular growth and proliferation. Its mRNA

is highly structured and contains an oligopyrimidine tract (5'-TOP) in its 5' untranslated region that functions to repress its translation under quiescent conditions. The encoded protein is involved in a variety of cellular pathways, including apoptosis, protein synthesis and cell division. It binds to and stabilizes microtubules, and removal of this protein through phosphorylation is required for progression through mitotic and meiotic cell divisions. This gene is known to play a role in carcinogenesis, and is upregulated in some cancer cells. Alternative splicing results in multiple transcript variants encoding different isoforms.
