**Summary:** This gene encodes a member of the nucleosome assembly protein (NAP) family. This protein participates in DNA replication and may play a role in modulating chromatin formation and contribute to the regulation of cell proliferation. Alternative splicing results in multiple transcript variants encoding different isoforms; however, not all have been fully described. [provided by RefSeq, Apr 2015]

### Product images:

Coomassie blue staining of purified NAP1L1 protein (Cat# [TP301851]). The protein was produced from HEK293T cells transfected with NAP1L1 cDNA clone (Cat# [RC201851]) using MegaTran 2.0 (Cat# [TT210002]).
