	EDF1 (NM_003792) Human Recombinant Protein – TP301996L
RefSeq Size:	701
Cytogenetics:	9q34.3
RefSeq ORF:	444
Synonyms:	CFAP280; EDF-1; MBF1
Summary:	This gene encodes a protein that may regulate endothelial cell differentiation, lipid metabolism, and hormone-induced cardiomyocyte hypertrophy. The encoded protein has also been found to act as a transcriptional coactivator by interconnecting the general transcription factor TATA element-binding protein (TBP) and gene-specific activators. Alternate splicing results in multiple transcript variants. [provided by RefSeq, Jul 2013]
Protein Families	Druggable Genome, Transcription Factors
