## Glycogenin 2 (GYG2) (NM\_001079855) Human Recombinant Protein

**Product data:** 

**Product Type:** Recombinant Proteins

**Description:** Recombinant protein of human glycogenin 2 (GYG2), transcript variant 1, 100 μg

Species: Human Expression Host: HEK293T

**Expression cDNA** >RC202043 protein sequence Clone or AA Sequence: Red=Cloning site Green=Tags(s)

**SGPTRTRPLEQKLISEEDLAANDILDYKDDDDKV** 

Tag: C-Myc/DDK
Predicted MW: 51.8 kDa

**Concentration:** >0.05 μg/μL as determined by microplate BCA method

**Purity:** > 80% as determined by SDS-PAGE and Coomassie blue staining

**Buffer:** 25 mM Tris-HCl, 100 mM glycine, pH 7.3, 10% glycerol

**Preparation:** Recombinant protein was captured through anti-DDK affinity column followed by conventional

chromatography steps.

**Note:** For testing in cell culture applications, please filter before use. Note that you may experience

some loss of protein during the filtration process.

Storage: Store at -80°C.

Stability: Stable for 12 months from the date of receipt of the product under proper storage and handling

conditions. Avoid repeated freeze-thaw cycles.

**RefSeq:** NP 001073324

**Locus ID:** 8908

UniProt ID: O15488
RefSeq Size: 3318
Cytogenetics: Xp22.33
RefSeq ORF: 1410

Synonyms: GN-2; GN2

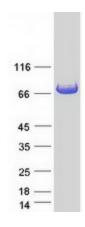

**Summary:** This gene encodes a member of the the glycogenin family. Glycogenin is a self-glucosylating

protein involved in the initiation reactions of glycogen biosynthesis. A gene on chromosome 3 encodes the muscle glycogenin and this X-linked gene encodes the glycogenin mainly present in

liver; both are involved in blood glucose homeostasis. This gene has a short version on chromosome Y, which is 3' truncated and can not make a functional protein. Multiple alternatively spliced transcript variants encoding different isoforms have been identified.
