## IL8 (CXCL8) (NM\_000584) Human Recombinant Protein

#### **Product data:**

**Product Type:** Recombinant Proteins

**Description:** Purified recombinant protein of Human interleukin 8 (IL8), secretory expressed in HEK293T

cells, 20ug

Species: Human
Expression Host: HEK293T

Expression cDNA Clone >RC202075 representing NM\_000584

or AA Sequence: Red=Cloning site Green=Tags(s)

MTSKLAVALLAAFLISAALCEGAVLPRSAKELRCQCIKTYSKPFHPKFIKELRVIESGPHCANTEIIVKL

**SDGRELCLDPKENWVQRVVEKFLKRAENS** 

**TRTRPL**EQKLISEEDLAANDILDYKDDDDK**V** 

Tag: C-Myc/DDK

**Predicted MW:** 12.7 kDa

**Concentration:** >50 ug/mL as determined by microplate Bradford method

**Purity:** > 80% as determined by SDS-PAGE and Coomassie blue staining

**Buffer:** 25mM Tris-HCl, pH7.3, 100mM glycine, 10% glycerol

**Note:** For culture applications, please filter before use. Note that you may experience some loss of

protein during the filtration process.

**Storage:** Store at -80°C after receiving vials.

Stability: Stable for at least 1 year from receipt of products under proper storage and handling

conditions. Avoid repeated freeze-thaw cycles.

**RefSeq:** NP 000575

**Locus ID:** 3576

**UniProt ID:** <u>P10145</u>, <u>A0A024RDA5</u>

RefSeq Size: 1666

**Cytogenetics:** 4q13.3

RefSeq ORF: 297

Synonyms:

GCP-1; GCP1; IL8; LECT; LUCT; LYNAP; MDNCF; MONAP; NAF; NAP-1; NAP1; SCYB8

Summary:

The protein encoded by this gene is a member of the CXC chemokine family and is a major mediator of the inflammatory response. The encoded protein is commonly referred to as interleukin-8 (IL-8). IL-8 is secreted by mononuclear macrophages, neutrophils, eosinophils, T lymphocytes, epithelial cells, and fibroblasts. It functions as a chemotactic factor by guiding the neutrophils to the site of infection. Bacterial and viral products rapidly induce IL-8 expression. IL-8 also participates with other cytokines in the proinflammatory signaling cascade and plays a role in systemic inflammatory response syndrome (SIRS). This gene is believed to play a role in the pathogenesis of the lower respiratory tract infection bronchiolitis, a common respiratory tract disease caused by the respiratory syncytial virus (RSV). The overproduction of this proinflammatory protein is thought to cause the lung inflammation associated with csytic fibrosis. This proinflammatory protein is also suspected of playing a role in coronary artery disease and endothelial dysfunction. This protein is also secreted by tumor cells and promotes tumor migration, invasion, angiogenesis and metastasis. This chemokine is also a potent angiogenic factor. The binding of IL-8 to one of its receptors (IL-8RB/CXCR2) increases the permeability of blood vessels and increasing levels of IL-8 are positively correlated with increased severity of multiple disease outcomes (eg, sepsis). This gene and other members of the CXC chemokine gene family form a gene cluster in a region of chromosome 4g. [provided by RefSeg, May 2020]

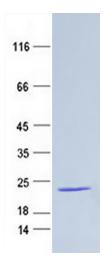

**Protein Families:** 

Druggable Genome, Secreted Protein, Transmembrane

**Protein Pathways:** 

Bladder cancer, Chemokine signaling pathway, Cytokine-cytokine receptor interaction, Epithelial cell signaling in Helicobacter pylori infection, NOD-like receptor signaling pathway, Pathways in cancer, RIG-I-like receptor signaling pathway, Toll-like receptor signaling pathway

# **Product images:**

Coomassie blue staining of purified IL8 protein (Cat #TP302075SE). The protein was produced from mammalian cells transfected with IL8 cDNA clone (Cat #[RC202075]).
