**Summary:** This gene encodes an angiogenic factor which promotes angiogenesis in vivo and stimulates

the in vitro growth of a variety of endothelial cells. It has a highly restricted target cell specificity acting only on endothelial cells. Mutations in this gene have been associated with mitochondrial neurogastrointestinal encephalomyopathy. Multiple alternatively spliced

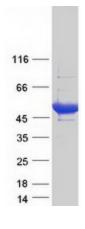

transcript variants have been identified. [provided by RefSeq, Apr 2012]

**Protein Families:** Druggable Genome

**Protein Pathways:** Bladder cancer, Drug metabolism - other enzymes, Metabolic pathways, Pyrimidine

metabolism
