## MRPS30 (NM 016640) Human Recombinant Protein

**Product data:** 

**Product Type:** Recombinant Proteins

**Description:** Recombinant protein of human mitochondrial ribosomal protein S30 (MRPS30), nuclear gene

encoding mitochondrial protein, 1 mg

Species: Human
Expression Host: HEK293T

**Expression cDNA Clone** >RC202830 protein sequence or AA Sequence: Red=Cloning site Green=Tags(s)

**IVHFLLNRPKEEKSQLLEN** 

**TRTRPL**EQKLISEEDLAANDILDYKDDDDK**V** 

Tag: C-Myc/DDK
Predicted MW: 50.2 kDa

Concentration: >0.05 µg/µL as determined by microplate BCA method

**Purity:** > 80% as determined by SDS-PAGE and Coomassie blue staining

**Buffer:** 25 mM Tris-HCl, 100 mM glycine, pH 7.3, 10% glycerol

**Preparation:** Recombinant protein was captured through anti-DDK affinity column followed by

conventional chromatography steps.

**Note:** For testing in cell culture applications, please filter before use. Note that you may experience

some loss of protein during the filtration process.

Storage: Store at -80°C.

Stability: Stable for 12 months from the date of receipt of the product under proper storage and

handling conditions. Avoid repeated freeze-thaw cycles.

**RefSeq:** NP 057724

Locus ID: 10884
UniProt ID: Q9NP92
RefSeq Size: 1686
Cytogenetics: 5p12
RefSeq ORF: 1317

**Synonyms:** MRP-S30; PAP; PDCD9; S30mt

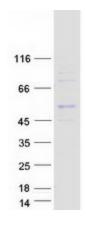

**Summary:** Mammalian mitochondrial ribosomal proteins are encoded by nuclear genes and help in

protein synthesis within the mitochondrion. Mitochondrial ribosomes (mitoribosomes) consist of a small 28S subunit and a large 39S subunit. They have an estimated 75% protein to rRNA composition compared to prokaryotic ribosomes, where this ratio is reversed. Another difference between mammalian mitoribosomes and prokaryotic ribosomes is that the latter contain a 5S rRNA. Among different species, the proteins comprising the mitoribosome differ greatly in sequence, and sometimes in biochemical properties, which prevents easy

recognition by sequence homology. This gene encodes a 28S subunit protein that is similar to the chicken pro-apoptotic protein p52. Transcript variants using alternative promoters or polyA sites have been mentioned in the literature but the complete description of these

sequences is not available. [provided by RefSeq, Jul 2008]

## **Product images:**

Coomassie blue staining of purified MRPS30 protein (Cat# [TP302830]). The protein was produced from HEK293T cells transfected with MRPS30 cDNA clone (Cat# [RC202830]) using MegaTran 2.0 (Cat# [TT210002]).
