	TSSC4 (NM_005706) Human Recombinant Protein – TP302870L
UniProt ID:	<u>Q9Y5U2</u>
RefSeq Size:	1749
Cytogenetics:	11p15.5
RefSeq ORF:	987
Summary:	This gene is one of several tumor-suppressing subtransferable fragments located in the imprinted gene domain of 11p15.5, an important tumor-suppressor gene region. Alterations in this region have been associated with the Beckwith-Wiedemann syndrome, Wilms tumor, rhabdomyosarcoma, adrenocortical carcinoma, and lung, ovarian, and breast cancer. This gene is located among several imprinted genes; however, this gene, as well as the panhematopoietic expression gene (PHEMX), escapes imprinting. This gene may play a role in malignancies and disease that involve this region. Several transcript variants encoding two different isoforms have been found for this gene.
