	trfp (MED20) (NM_004275) Human Recombinant Protein – TP303152M
RefSeq Size:	2478
Cytogenetics:	6p21.1
RefSeq ORF:	636
Synonyms:	PRO0213; SRB2; TRFP
Summary:	This gene encodes a component of the mediator complex (also known as TRAP, SMCC, DRIP, or ARC), a transcriptional coactivator complex thought to be required for the expression of almost all genes. The mediator complex is recruited by transcriptional activators or nuclear receptors to induce gene expression, by interacting with RNA polymerase II and promoting the formation of a transcriptional pre-initiation complex. A mutation in this gene has been associated with a novel infantile-onset neurodegenerative movement disorder. Alternatively spliced transcript variants have been identified.
