Summary: Component of the CCR4-NOT complex which is one of the major cellular mRNA deadenylases

and is linked to various cellular processes including bulk mRNA degradation, miRNA-mediated repression, translational repression during translational initiation and general transcription regulation. Additional complex functions may be a consequence of its influence on mRNA expression. May be involved in metabolic regulation; may be involved in recruitment of the CCR4-NOT complex to deadenylation target mRNAs involved in energy metabolism. Involved in mitotic progression and regulation of the spindle assembly checkpoint by regulating the stability of MAD1L1 mRNA. Can repress transcription and may link the CCR4-NOT complex to transcriptional regulation; the repressive function may involve histone deacetylases. Involved in

the maintenance of embryonic stem (ES) cell identity.[UniProtKB/Swiss-Prot Function]

Protein Families: Transcription Factors
Protein Pathways: RNA degradation
