	KChIP2 (KCNIP2) (NM_173192) Human Recombinant Protein – TP303823
UniProt ID:	<u>Q9NS61, B3KSZ5</u>
RefSeq Size:	2509
Cytogenetics:	10q24.32
RefSeq ORF:	756
Synonyms:	KCHIP2
Summary:	This gene encodes a member of the family of voltage-gated potassium (Kv) channel- interacting proteins (KCNIPs), which belongs to the recoverin branch of the EF-hand superfamily. Members of the KCNIP family are small calcium binding proteins. They all have EF-hand-like domains, and differ from each other in the N-terminus. They are integral subunit components of native Kv4 channel complexes. They may regulate A-type currents, and hence neuronal excitability, in response to changes in intracellular calcium. Multiple alternatively spliced transcript variants encoding distinct isoforms have been identified from this gene. [provided by RefSeq, Jul 2008]
