RefSeq:	NP_000051
Locus ID:	686
UniProt ID:	P43251
RefSeq Size:	2084
Cytogenetics:	3p25.1
RefSeq ORF:	1629
Synonyms:	biotinidase
Summary:	The protein encoded by this gene functions to recycle protein-bound biotin by cleaving biocytin (biotin-epsilon-lysine), a normal product of carboxylase degradation, resulting in regeneration of free biotin. The encoded protein has also been shown to have biotinyl transferase activity. Mutations in this gene are associated with biotinidase deficiency. Multiple transcript variants encoding different isoforms have been described. [provided by RefSeq, Aug 2013]
