MICA (NM 000247) Human Recombinant Protein

Product data:

Product Type: Recombinant Proteins

Description: Recombinant protein of human MHC class I polypeptide-related sequence A (MICA), 100 μg

Species: Human
Expression Host: HEK293T

Expression cDNA Clone >RC204447 protein sequence or AA Sequence: Red=Cloning site Green=Tags(s)

TRTRPLEQKLISEEDLAANDILDYKDDDDKV

Tag: C-Myc/DDK
Predicted MW: 40.7 kDa

Concentration: $>0.05 \mu g/\mu L$ as determined by microplate BCA method

Purity: > 80% as determined by SDS-PAGE and Coomassie blue staining

Buffer: 25 mM Tris-HCl, 100 mM glycine, pH 7.3, 10% glycerol

Preparation: Recombinant protein was captured through anti-DDK affinity column followed by

conventional chromatography steps.

Note: For testing in cell culture applications, please filter before use. Note that you may experience

some loss of protein during the filtration process.

Storage: Store at -80°C.

MICA (NM_000247) Human Recombinant Protein - TP304447M

Stability: Stable for 12 months from the date of receipt of the product under proper storage and

handling conditions. Avoid repeated freeze-thaw cycles.

 RefSeq:
 NP 000238

 Locus ID:
 100507436

 UniProt ID:
 Q29983

 RefSeq Size:
 1410

Cytogenetics: 6p21.33 RefSeq ORF: 1149

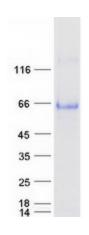

Synonyms: MIC-A; PERB11.1

Summary: This gene encodes the highly polymorphic major histocompatability complex class I chain-

related protein A. The protein product is expressed on the cell surface, although unlike canonical class I molecules it does not seem to associate with beta-2-microglobulin. It is a ligand for the NKG2-D type II integral membrane protein receptor. The protein functions as a stress-induced antigen that is broadly recognized by intestinal epithelial gamma delta T cells. Variations in this gene have been associated with susceptibility to psoriasis 1 and psoriatic arthritis, and the shedding of MICA-related antibodies and ligands is involved in the progression from monoclonal gammopathy of undetermined significance to multiple myeloma. Alternative splicing of this gene results in multiple transcript variants. [provided by

RefSeq, Jan 2014]

Product images:

Coomassie blue staining of purified MICA protein (Cat# [TP304447]). The protein was produced from HEK293T cells transfected with MICA cDNA clone (Cat# [RC204447]) using MegaTran 2.0 (Cat# [TT210002]).
