Summary: This gene encodes a member of the fibronectin leucine rich transmembrane protein (FLRT)

family. The family members may function in cell adhesion and/or receptor signalling. Their protein structures resemble small leucine-rich proteoglycans found in the extracellular matrix. The encoded protein shares sequence similarity with two other family members, FLRT2 and

FLRT3. This gene is expressed in kidney and brain. [provided by RefSeq, Jul 2008]

Protein Families: Druggable Genome, Transmembrane
