**Summary:** This gene encodes a highly conserved enzyme that belongs to the aminoacyl-tRNA

synthetase class IIc subfamily. This enzyme comprises the regulatory beta subunits that form

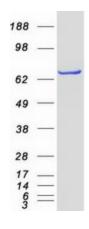

a tetramer with two catalytic alpha subunits. In the presence of ATP, this tetramer is

responsible for attaching L-phenylalanine to the terminal adenosine of the appropriate tRNA. A pseudogene located on chromosome 10 has been identified. Alternative splicing results in

multiple transcript variants. [provided by RefSeq, Jan 2015]

**Protein Pathways:** Aminoacyl-tRNA biosynthesis
