Arginase 1 (ARG1) (NM_000045) Human Recombinant Protein

Product data:

Product Type: Recombinant Proteins

Description: Recombinant protein of human arginase, liver (ARG1), 100 μg

Species: Human
Expression Host: HEK293T

Expression cDNA Clone >RC204649 protein sequence or AA Sequence: Red=Cloning site Green=Tags(s)

TRTRPLEQKLISEEDLAANDILDYKDDDDKV

Tag: C-Myc/DDK
Predicted MW: 34.6 kDa

Concentration: >0.05 μg/μL as determined by microplate BCA method

Purity: > 80% as determined by SDS-PAGE and Coomassie blue staining

Buffer: 25 mM Tris-HCl, 100 mM glycine, pH 7.3, 10% glycerol

Bioactivity: Arginase activity verified in a biochemical assay: Arginase 1 (ARG1, TP304649) activity was

measured in a colorimetric biochemical assay. Arginase 1 catalyzes the conversion of arginine to ornithine and urea. After incubation of the protein in a solution containing L-arginine, the reaction is stopped, and the urea concentration is measured by a chemical reaction that produces a colored product that absorbs at 430 nm. By measuring the absorbance at 430 nm and comparing to a standard, the specific activity of this preparation of ARG1 was calculated

to be approximately 10U/mg.

Unit definition: 1 unit of ARG1 converts 1 µmole of L-arginine to ornithine and urea per

minute at pH 9.5 and 37°C.

Preparation: Recombinant protein was captured through anti-DDK affinity column followed by

conventional chromatography steps.

Arginase 1 (ARG1) (NM_000045) Human Recombinant Protein - TP304649M

Note: For testing in cell culture applications, please filter before use. Note that you may experience

some loss of protein during the filtration process.

Storage: Store at -80°C.

Stability: Stable for 12 months from the date of receipt of the product under proper storage and

handling conditions. Avoid repeated freeze-thaw cycles.

RefSeq: NP 000036

Locus ID: 383

UniProt ID: P05089
RefSeq Size: 1475
Cytogenetics: 6q23.2

RefSeq ORF: 966

Summary: Arginase catalyzes the hydrolysis of arginine to ornithine and urea. At least two isoforms of

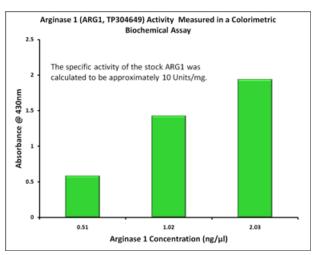

mammalian arginase exist (types I and II) which differ in their tissue distribution, subcellular localization, immunologic crossreactivity and physiologic function. The type I isoform encoded by this gene, is a cytosolic enzyme and expressed predominantly in the liver as a component of the urea cycle. Inherited deficiency of this enzyme results in argininemia, an autosomal recessive disorder characterized by hyperammonemia. Two transcript variants encoding

different isoforms have been found for this gene. [provided by RefSeq, Sep 2011]
