**Summary:** The protein encoded by this gene is a G protein-coupled receptor which activates a

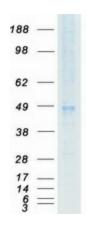

phosphatidylinositol-calcium second messenger system. Its ligand, endothelin, consists of a family of three potent vasoactive peptides: ET1, ET2, and ET3. Studies suggest that the multigenic disorder, Hirschsprung disease type 2, is due to mutations in the endothelin receptor type B gene. Alternative splicing and the use of alternative promoters results in

multiple transcript variants. [provided by RefSeq, Oct 2016]

**Protein Families:** Druggable Genome, GPCR, Transmembrane

**Protein Pathways:** Calcium signaling pathway, Melanogenesis, Neuroactive ligand-receptor interaction
