Summary: The protein encoded by this gene is a transketolase that acts as a homodimer and cata conversion of sedoheptulose 7-phosphate and D-glyceraldehyde 3-phosphate to D-ribo phosphate and D-xylulose 5-phosphate. This reaction links the pentose phosphate path the glycolytic pathway. Variations in this gene may be the cause of Wernicke-Korsakoff syndrome. Three transcript variants encoding different isoforms have been found for t [provided by RefSeq, Mar 2011]	
Protein Families:	Druggable Genome
Protein Pathway	s: Metabolic pathways, Pentose phosphate pathway
