Summary: This protein is a member of the keratin-associated protein (KAP) family. The KAP proteins

form a matrix of keratin intermediate filaments which contribute to the structure of hair fibers. KAP family members appear to have unique, family-specific amino- and carboxylterminal regions and are subdivided into three multi-gene families according to amino acid composition: the high sulfur, the ultrahigh sulfur, and the high tyrosine/glycine KAPs. This protein is a member of the high sulfur KAP family and the gene is localized to a cluster of

KAPs at 17q12-q21. [provided by RefSeq, Jul 2008]
