Summary: This gene encodes a member of the phospholipase D (PLD) family of enzymes that catalyze the

hydrolysis of membrane phospholipids. The encoded protein is a single-pass type II membrane protein and contains two PLD phosphodiesterase domains. This protein influences processing of amyloid-beta precursor protein. Mutations in this gene are associated with Alzheimer disease risk. Alternatively spliced transcript variants encoding the same protein have been found for this

gene. [provided by RefSeq, Apr 2014]
