## MTLRP (GHRL) (NM\_016362) Human Recombinant Protein

**Product data:** 

**Product Type:** Recombinant Proteins

**Description:** Purified recombinant protein of Homo sapiens ghrelin/obestatin prepropeptide (GHRL),

transcript variant 1, 1 mg

Species: Human Expression Host: HEK293T

**Expression cDNA Clone** >RC206989 protein sequence or AA Sequence: Red=Cloning site Green=Tags(s)

MPSPGTVCSLLLLGMLWLDLAMAGSSFLSPEHQRVQQRKESKKPPAKLQPRALAGWLRPEDGGQAEGAED

EMEVRFNAPFDVGIKLSGVQYQQHSQALGKFLQDILWEEAKEAPADK

**TRTRPLEQKLISEEDLAANDILDYKDDDDKV** 

Tag: C-Myc/DDK
Predicted MW: 10.4 kDa

**Concentration:** >0.05 μg/μL as determined by microplate BCA method

**Purity:** > 80% as determined by SDS-PAGE and Coomassie blue staining

**Buffer:** 25 mM Tris-HCl, 100 mM glycine, pH 7.3, 10% glycerol

**Preparation:** Recombinant protein was captured through anti-DDK affinity column followed by conventional

chromatography steps.

**Note:** For testing in cell culture applications, please filter before use. Note that you may experience

some loss of protein during the filtration process.

Storage: Store at -80°C.

Stability: Stable for 12 months from the date of receipt of the product under proper storage and handling

conditions. Avoid repeated freeze-thaw cycles.

RefSeq: NP 057446

 Locus ID:
 51738

 UniProt ID:
 Q9UBU3

RefSeq Size: 552

Cytogenetics: 3p25.3

RefSeq ORF: 351

Synonyms: MTLRP

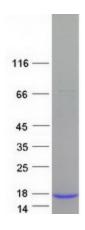

Summary: This gene encodes the ghrelin-obestatin preproprotein that is cleaved to yield two peptides,

ghrelin and obestatin. Ghrelin is a powerful appetite stimulant and plays an important role in energy homeostasis. Its secretion is initiated when the stomach is empty, whereupon it binds to the growth hormone secretagogue receptor in the hypothalamus which results in the secretion of growth hormone (somatotropin). Ghrelin is thought to regulate multiple activities, including hunger, reward perception via the mesolimbic pathway, gastric acid secretion, gastrointestinal motility, and pancreatic glucose-stimulated insulin secretion. It was initially proposed that obestatin plays an opposing role to ghrelin by promoting satiety and thus decreasing food intake, but this action is still debated. Recent reports suggest multiple metabolic roles for obestatin, including regulating adipocyte function and glucose metabolism. Alternative splicing results in multiple transcript variants. In addition, antisense transcripts for this gene have been identified and may potentially regulate ghrelin-obestatin preproprotein expression. [provided by RefSeq, Nov 2014]

**Protein Families:** 

Coomassie blue staining of purified GHRL protein (Cat# [TP306989]). The protein was produced from HEK293T cells transfected with GHRL cDNA clone (Cat# [RC206989]) using MegaTran 2.0 (Cat# [TT210002]).
