**Summary:** This gene encodes a member of the aldehyde dehydrogenase protein family. The encoded protein

is a mitochondrial methylmalonate semialdehyde dehydrogenase that plays a role in the valine

and pyrimidine catabolic pathways. This protein catalyzes the irreversible oxidative

decarboxylation of malonate and methylmalonate semialdehydes to acetyl- and propionyl-CoA. Methylmalonate semialdehyde dehydrogenase deficiency is characterized by elevated beta-alanine, 3-hydroxypropionic acid, and both isomers of 3-amino and 3-hydroxyisobutyric acids in urine organic acids. Alternate splicing results in multiple transcript variants. [provided by RefSeq,

isoleucine degradation
