

UniProt ID:	<a href="#">Q8IXQ9</a>
RefSeq Size:	2183
Cytogenetics:	12p11.21
RefSeq ORF:	786
Synonyms:	C12orf72; ETFB-KMT; METTL20
Summary:	Protein-lysine methyltransferase that selectively trimethylates the flavoprotein ETFB in mitochondria (PubMed:25023281, PubMed:25416781). Thereby, may negatively regulate the function of ETFB in electron transfer from Acyl-CoA dehydrogenases to the main respiratory chain (PubMed:25416781).[UniProtKB/Swiss-Prot Function]
Protein Families:	Druggable Genome

### Product images:

Coomassie blue staining of purified ETFBKMT protein (Cat# [TP308154]). The protein was produced from HEK293T cells transfected with ETFBKMT cDNA clone (Cat# [RC208154]) using MegaTran 2.0 (Cat# [TT210002]).
