#### KCNIP1 (NM\_014592) Human Recombinant Protein - TP308255L

**UniProt ID: Q9NZI2**, **Q9NZI2-2**

Synonyms: KCHIP1; VABP

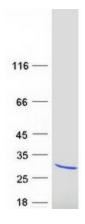

**Summary:** This gene encodes a member of the family of cytosolic voltage-gated potassium (Kv) channel-

interacting proteins (KCNIPs), which belong to the neuronal calcium sensor (NCS) family of the calcium binding EF-hand proteins. They associate with Kv4 alpha subunits to form native Kv4 channel complexes. The encoded protein may regulate rapidly inactivating (A-type) currents, and hence neuronal membrane excitability, in response to changes in the concentration of intracellular calcium. Alternative splicing results in multiple transcript variants encoding

different isoforms. [provided by RefSeq, May 2013]
