Summary: This gene encodes a protein which is a member of the bromodomain-containing protein

family. The product of this gene has been identified as a component of one form of the SWI/SNF chromatin remodeling complex, and as a protein which interacts with p53 and is required for p53-dependent oncogene-induced senescence which prevents tumor growth. Pseudogenes have been described on chromosomes 2, 3, 6, 13 and 14. Alternative splicing

results in multiple transcript variants. [provided by RefSeq, Jul 2010]
