**Summary:** The protein encoded by this gene recognizes the sequence CCTTGAG along with other members

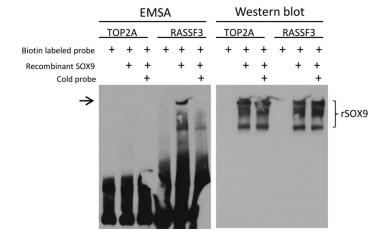

of the HMG-box class DNA-binding proteins. It acts during chondrocyte differentiation and, with steroidogenic factor 1, regulates transcription of the anti-Muellerian hormone (AMH) gene. Deficiencies lead to the skeletal malformation syndrome campomelic dysplasia, frequently with

sex reversal. [provided by RefSeq, Jul 2008]

**Protein Families:** Adult stem cells, Druggable Genome, Embryonic stem cells, ES Cell Differentiation/IPS, Induced

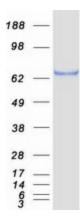

pluripotent stem cells, Transcription Factors

Recombinant human SOX9 protein directly binds to RASSF3 promoter sequence, but not TOP2A promoter sequence. EMSA was performed with biotin-labeled oligonucleotides for TOP2A and RASSF3 with or without recombinant SOX9 (OriGene [TP308944]). Excess unlabeled oligonucleotides (cold probe) served as controls. Both sequences contain the SOX9 peak center obtained from ChIP-seq experiments. Western blot was performed on the same membrane used for EMSA to detect recombinant human SOX9 protein. Coomassie blue staining of purified SOX9 protein (Cat# [TP308944]). The protein was produced from HEK293T cells transfected with SOX9 cDNA clone (Cat# [RC208944]) using MegaTran 2.0 (Cat# [TT210002]).
