

Product datasheet for **TP308947M**

beta Catenin (CTNNB1) (NM_001904) Human Recombinant Protein

Product data:

Product Type: Recombinant Proteins
Description: Recombinant protein of human catenin (cadherin-associated protein), beta 1, 88kDa (CTNNB1), 100 µg
Species: Human
Expression Host: HEK293T
Expression cDNA Clone or AA Sequence: >RC208947 representing NM_001904
Red=Cloning site **Green**=Tags(s)

TRTRPLEQKLISEEDLAANDILDYKDDDDKV

Tag: C-Myc/DDK
Predicted MW: 85.3 kDa
Concentration: >0.1 µg/µL as determined by microplate BCA method
Purity: > 80% as determined by SDS-PAGE and Coomassie blue staining
Buffer: 25 mM Tris-HCl, 100 mM glycine, pH 7.3, 10% glycerol
Bioactivity: Pull-down assay (PMID: [27203386](https://pubmed.ncbi.nlm.nih.gov/27203386/))
Preparation: Recombinant protein was captured through anti-DDK affinity column followed by conventional chromatography steps.

Note:	For testing in cell culture applications, please filter before use. Note that you may experience some loss of protein during the filtration process.
Storage:	Store at -80°C.
Stability:	Stable for 12 months from the date of receipt of the product under proper storage and handling conditions. Avoid repeated freeze-thaw cycles.
RefSeq:	NP_001895
Locus ID:	1499
UniProt ID:	P35222 , A0A024R2Q3
RefSeq Size:	3697
Cytogenetics:	3p22.1
RefSeq ORF:	2343
Synonyms:	armadillo; CTNNB; EVR7; MRD19; NEDSDV
Summary:	The protein encoded by this gene is part of a complex of proteins that constitute adherens junctions (AJs). AJs are necessary for the creation and maintenance of epithelial cell layers by regulating cell growth and adhesion between cells. The encoded protein also anchors the actin cytoskeleton and may be responsible for transmitting the contact inhibition signal that causes cells to stop dividing once the epithelial sheet is complete. Finally, this protein binds to the product of the APC gene, which is mutated in adenomatous polyposis of the colon. Mutations in this gene are a cause of colorectal cancer (CRC), pilomatixoma (PTR), medulloblastoma (MDB), and ovarian cancer. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Aug 2016]
Protein Families:	Druggable Genome, ES Cell Differentiation/IPS, Transcription Factors
Protein Pathways:	Adherens junction, Arrhythmogenic right ventricular cardiomyopathy (ARVC), Basal cell carcinoma, Colorectal cancer, Endometrial cancer, Focal adhesion, Leukocyte transendothelial migration, Melanogenesis, Pathogenic Escherichia coli infection, Pathways in cancer, Prostate cancer, Thyroid cancer, Tight junction, Wnt signaling pathway

Product images:

Substitution of E-cadherin Thr790 with Glu reduces the binding between E-cadherin and beta-catenin. Purified beta-catenin (OriGene [TP308947]) was incubated with purified wild-type (wt) or mutant (T790A or T790E) GST-E-cadherin-cytoplasmic domains (cd) or GST (as a control). The protein complexes were pulled-down by glutathione-agarose beads and analyzed by immunoblotting with an anti-beta-catenin antibody. The level of bound beta-catenin was quantified and expressed as the fold relative to the level in the GST-E-cadherin-cd wt. * P < 0.05. Figure cited from Oncotarget, PMID: 27203386

Coomassie blue staining of purified CTNNB1 protein (Cat# [TP308947]). The protein was produced from HEK293T cells transfected with CTNNB1 cDNA clone (Cat# [RC208947]) using MegaTran 2.0 (Cat# [TT210002]).
