Shwachman Bodian Diamond syndrome (SBDS) (NM_016038) Human Recombinant Protein – TP308964M

RefSeq Size: 1605

Cytogenetics: 7q11.21 RefSeq ORF: 750

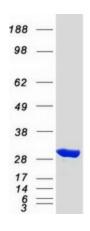

Synonyms: CGI-97; SDO1; SDS; SWDS

Summary: This gene encodes a highly conserved protein that plays an essential role in ribosome

biogenesis. The encoded protein interacts with elongation factor-like GTPase 1 to disassociate eukaryotic initiation factor 6 from the late cytoplasmic pre-60S ribosomal subunit allowing assembly of the 80S subunit. Mutations within this gene are associated with the autosomal recessive disorder Shwachman-Bodian-Diamond syndrome. This gene has a closely linked

pseudogene that is distally located. [provided by RefSeq, Jan 2017]
