COPG (COPG1) (NM_016128) Human Recombinant Protein

Product data:

Product Type: Recombinant Proteins

Description: Recombinant protein of human coatomer protein complex, subunit gamma (COPG), 20 μg

Species: Human
Expression Host: HEK293T

Expression cDNA Clone >RC209018 protein sequence or AA Sequence: Red=Cloning site Green=Tags(s)

LVRSRLLLLDTVTMQVTARSLEELPVDIILASVG

TRTRPLEQKLISEEDLAANDILDYKDDDDKV

Tag: C-Myc/DDK
Predicted MW: 97.5 kDa

Concentration: >0.05 μg/μL as determined by microplate BCA method

Purity: > 80% as determined by SDS-PAGE and Coomassie blue staining

Buffer: 25 mM Tris-HCl, 100 mM glycine, pH 7.3, 10% glycerol

Preparation: Recombinant protein was captured through anti-DDK affinity column followed by

conventional chromatography steps.

COPG (COPG1) (NM_016128) Human Recombinant Protein - TP309018

Note: For testing in cell culture applications, please filter before use. Note that you may experience

some loss of protein during the filtration process.

Storage: Store at -80°C.

Stability: Stable for 12 months from the date of receipt of the product under proper storage and

handling conditions. Avoid repeated freeze-thaw cycles.

RefSeq: NP 057212

 Locus ID:
 22820

 UniProt ID:
 Q9Y678

 RefSeq Size:
 3114

 Cytogenetics:
 3q21.3

 RefSeq ORF:
 2622

 Synonyms:
 COPG

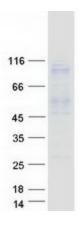

Summary: The coatomer is a cytosolic protein complex that binds to dilysine motifs and reversibly

associates with Golgi non-clathrin-coated vesicles, which further mediate biosynthetic protein transport from the ER, via the Golgi up to the trans Golgi network. Coatomer complex is required for budding from Golgi membranes, and is essential for the retrograde Golgi-to-ER transport of dilysine-tagged proteins. In mammals, the coatomer can only be recruited by membranes associated to ADP-ribosylation factors (ARFs), which are small GTP-binding proteins; the complex also influences the Golgi structural integrity, as well as the processing, activity, and endocytic recycling of LDL receptors. Required for limiting lipid storage in lipid droplets. Involved in lipid homeostasis by regulating the presence of perilipin family members PLIN2 and PLIN3 at the lipid droplet surface and promoting the association of adipocyte triglyceride lipase (PNPLA2) with the lipid droplet surface to mediate lipolysis (By

similarity).[UniProtKB/Swiss-Prot Function]

Protein Families: Druggable Genome

Product images:

Coomassie blue staining of purified COPG1 protein (Cat# TP309018). The protein was produced from HEK293T cells transfected with COPG1 cDNA clone (Cat# [RC209018]) using MegaTran 2.0 (Cat# [TT210002]).
