#### THEM4 (NM\_053055) Human Recombinant Protein – TP309396M

RefSeq Size: 2224

Cytogenetics: 1q21.3 RefSeq ORF: 720 Synonyms: **CTMP** 

**Summary:** Protein kinase B (PKB) is a major downstream target of receptor tyrosine kinases that signal

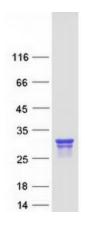

> via phosphatidylinositol 3-kinase. Upon cell stimulation, PKB is translocated to the plasma membrane, where it is phosphorylated in the C-terminal regulatory domain. The protein encoded by this gene negatively regulates PKB activity by inhibiting phosphorylation.

Transcription of this gene is commonly downregulated in glioblastomas. [provided by RefSeq,
