	Cytokeratin 19 (KRT19) (NM_002276) Human Recombinant Protein – TP309707
UniProt ID:	<u>P08727</u>
RefSeq Size:	1490
Cytogenetics:	17q21.2
RefSeq ORF:	1200
Synonyms:	CK19; K1CS; K19
Summary:	The protein encoded by this gene is a member of the keratin family. The keratins are intermediate filament proteins responsible for the structural integrity of epithelial cells and are subdivided into cytokeratins and hair keratins. The type I cytokeratins consist of acidic proteins which are arranged in pairs of heterotypic keratin chains. Unlike its related family members, this smallest known acidic cytokeratin is not paired with a basic cytokeratin in epithelial cells. It is specifically expressed in the periderm, the transiently superficial layer that envelopes the developing epidermis. The type I cytokeratins are clustered in a region of chromosome 17q12-q21.
