| Summary:          | The protein encoded by this gene is a core component of U small nuclear ribonucleoproteins,<br>which are key components of the pre-mRNA processing spliceosome. The encoded protein<br>plays a role in the 3' end processing of histone transcripts. This protein is one of the targets in<br>the autoimmune disease systemic lupus erythematosus, and mutations in this gene have<br>been associated with hypotrichosis. Several pseudogenes of this gene have been identified.<br>[provided by RefSeq, Jun 2016] |
| Protein Families: | Stem cell - Pluripotency   |
| Protein Pathway   | s: Spliceosome   |
