	TRAPPC2L (NM_016209) Human Recombinant Protein – TP310647M
Cytogenetics:	16q24.3
RefSeq ORF:	420
Synonyms:	HSPC176; PERRB
Summary:	This gene encodes a protein that interacts with the tethering factor trafficking protein particle (TRAPP complex). TRAPP complexes mediate the contact between vescicles and target membranes, and thus, are involved in vescicle-mediated transport of proteins and lipids. The encoded protein is related to the X-linked trafficking protein particle complex 2. A related pseudogene is located on the X chromosome. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Jan 2016]
