Summary:	Summary: This gene encodes a lysosomal membrane protein that cleaves the beta-glucosidic linka glycosylceramide, an intermediate in glycolipid metabolism. Mutations in this gene caus Gaucher disease, a lysosomal storage disease characterized by an accumulation of glucocerebrosides. A related pseudogene is approximately 12 kb downstream of this gene chromosome 1. Alternative splicing results in multiple transcript variants. [provided by I Jan 2010]
