	POF1B (NM_024921) Human Recombinant Protein – TP312627M
Note:	For testing in cell culture applications, please filter before use. Note that you may experience some loss of protein during the filtration process.
Storage:	Store at -80°C.
Stability:	Stable for 12 months from the date of receipt of the product under proper storage and handling conditions. Avoid repeated freeze-thaw cycles.
RefSeq:	<u>NP 079197</u>
Locus ID:	79983
UniProt ID:	<u>Q8WVV4</u>
RefSeq Size:	3942
Cytogenetics:	Xq21.1
RefSeq ORF:	1767
Synonyms:	POF; POF2B
Summary:	Premature ovarian failure (POF) is characterized by primary or secondary amenorrhea in women less than 40 years old. Two POF susceptibility regions called "POF1" and "POF2" have been identified by breakpoint mapping of X-autosome translocations. POF1 extends from Xg21-gter while POF2 extends from Xg13.3 to Xg21.1. This gene, POF1B, resides in the POF2

been identified by breakpoint mapping of X-autosome translocations. POF1 extends from Xq21-qter while POF2 extends from Xq13.3 to Xq21.1. This gene, POF1B, resides in the POF2 region. This gene is expressed at trace levels in mouse prenatal ovary and is barely detectable or absent from adult ovary, in human and in the mouse respectively. This gene's expression is restricted to epithelia with its highest expression in the epidermis, and oropharyngeal and gastro-intestinal tracts. The protein encoded by this gene binds non-muscle actin filaments. The role this gene may play in the etiology of premature ovarian failure remains to be determined. [provided by RefSeq, Jan 2010]

Coomassie blue staining of purified POF1B protein (Cat# [TP312627]). The protein was produced from HEK293T cells transfected with POF1B cDNA clone (Cat# [RC212627]) using MegaTran 2.0 (Cat# [TT210002]).
