Summary: This gene encodes a nebulin like protein that is abundantly expressed in cardiac muscle. The

encoded protein binds actin and interacts with thin filaments and Z-line associated proteins in striated muscle. This protein may be involved in cardiac myofibril assembly. A shorter isoform of this protein termed LIM nebulette is expressed in non-muscle cells and may function as a component of focal adhesion complexes. Alternate splicing results in multiple transcript

variants. [provided by RefSeq, Mar 2010]
