| Synonyms:     | 2C4D; CGI-95; MOB1; MOB3; MOBKL3; PHOCN; PREI3   |
| Summary:      | This gene was identified based on its similarity with the mouse counterpart. Studies of the<br>mouse counterpart suggest that the expression of this gene may be regulated during oocyte<br>maturation and preimplantation following zygotic gene activation. Alternatively spliced<br>transcript variants encoding distinct isoforms have been observed. Naturally occurring read-<br>through transcription occurs between this locus and the neighboring locus HSPE1.[provided by<br>RefSeq, Feb 2011] |
