Neuronal membrane glycoprotein M6 a (GPM6A) (NM_201592) Human Recombinant Protein – TP313529L

RefSeq Size: 2962

Cytogenetics: 4q34.2 RefSeq ORF: 801

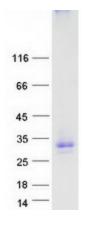

Synonyms: GPM6; M6A

Summary: Involved in neuronal differentiation, including differentiation and migration of neuronal stem

cells. Plays a role in neuronal plasticity and is involved in neurite and filopodia outgrowth, filopodia motility and probably synapse formation. GPM6A-induced filopodia formation involves mitogen-activated protein kinase (MAPK) and Src signaling pathways. May be involved in neuronal NGF-dependent Ca(2+) influx. May be involved in regulation of endocytosis and intracellular trafficking of G-protein-coupled receptors (GPCRs); enhances internalization and recycling of mu-type opioid receptor.
